

Attention All Garmin Owners!

Hello to all Garmin Owners! This section is for you to explore and learn more about your Garmin GPS unit. There are a lot of ways to customise your Garmin and also learn to update your GPS Firmware! Lets start with New Owner Section.

{slide=New Garmin GPS Owner Registration}

It is very important for you to register your Garmin GPS at the Garmin Official Website. Why do you need to register? Here are some reasons!

1. Get Updates. Registering your product gives you the option to find out about product enhancements, promotional material, and software and product upgrades.

2. Customize Your Account. The information you enter during the registration process is stored in your myGarmin® online account, which helps you keep track of your products and warranty status and gives you access to innovative, product-specific services and software, along with other exclusive benefits.

3. Protect Yourself. When you register your product, you can verify your ownership for insurance purposes if your product is ever lost or stolen (in the event you have insurance coverage on your product). Registering also allows us to contact you in the unlikely event that a safety modification or warning is issued for your product.

What are you waiting for? Click here to register now!
